Reading

- 1 Read the text. Match the headings (a-e) with the paragraphs (1-5).

Toads with a difference

- 1 The pebble toad is only found in one place in the world, on the flat top of the highest tabletop mountain in the world, Mount Roraima. This high mountain, is an incredible thirty-one kilometres squared and is on the borders of Venezuela, Brazil and Guyana.
- 2 The pebble toad looks like a pebble you might find on a beach and is 2.5 centimetres long. But this tiny black and grey creature is special because it has an unusual way of escaping the creatures who hunt it.
- 3 It can only do small jumps of a few centimetres. It does not run fast, and it is not poisonous. But it can pull its arms, legs and head tightly under its body to make it look like a pebble. When it sees its enemy, the tarantula spider, it throws itself off the rock and falls like a ball to the ground – to escape the spider! It is so small and light that it doesn't even get hurt!

The toad in the trees:

Like the pebble toad, the waterfall toad has an unusual way of getting out of danger. It likes wet tropical or subtropical forests and also lives in Venezuela, Brazil and Guyana. It is the size of a postage stamp, just 2.5 centimetres long and usually lives high up in the trees.

- 4 It has very large hands to help it climb and also has strong arms. Most frogs and toads usually have strong legs but this little toad is not a strong jumper and cannot jump any more than a few centimetres. It can however, escape danger when hunted by hungry snakes.
- 5 It doesn't fight, it doesn't hide and it can't run fast. It doesn't even roll like the pebble frog. If a hungry snake wants it for its dinner, it chooses to jump into the air. This is where its large hands are useful as, when it hits the branch of a tree, it uses its large strong hands to hold on. It then pulls itself up onto the branch with its strong arms. What strength!

- a How not to be eaten ____
- b On top of the world ____
- c You don't need speed to run away ____
- d Something from the sea? ____
- e Where its' strength lies ____
